MEMORANDUM FOR: Chief, Commo Division, OSO

SUBJECT: Broadcast Equipment.

1. In the near future OPC plans to use a sea-borne broadcast transmitter in the Mediterranean to transmit recorded programs inland with "live spot" announcements. On the advice of the appropriate technicians the equipment planned is a 1000 watt transmitter operating at between 800 and 1500 kilocycles.

2. We are unable to set down our requirements as to the size of ship necessary to transport and support such equipment without details of weight and space.

3. It is requested, therefore, that data be furnished on the weight, size, and approximate cost of this equipment and necessary accessories. The report will be used for further planning and as a basis for probable procurement request.
